Abstract:

In today's competitive market, brands increasingly rely on celebrity endorsements to capture consumer attention, enhance brand perception, and influence buying behavior. This study explores the relationship between celebrity endorsements, brand perception, and consumer buying behavior among consumers in South Gujarat. The research adopts a descriptive research design based on secondary data analysis, reviewing existing literature, project reports, and industry surveys to identify patterns and trends in consumer responses. The study does not apply primary statistical tests but synthesizes findings from secondary sources to understand the extent of influence reported in previous empirical studies. The analysis indicates that celebrity endorsements are associated with improved brand credibility, awareness, recall, and perceived quality, which contribute to consumer buying behavior. The findings also suggest that the effectiveness of endorsements varies depending on factors such as celebrity credibility, attractiveness, expertise, and alignment with brand values, as documented in the reviewed literature. The study provides insights for marketers to design strategic and credible endorsement campaigns that strengthen brand positioning and consumer engagement in competitive markets.

1. Introduction

In today's highly competitive and media-saturated marketplace, brands continuously seek innovative strategies to capture consumer attention and differentiate themselves from competitors. One of the most influential and widely adopted marketing techniques is celebrity endorsement, wherein well-known public figures are employed to promote products and services. This strategy is grounded in the assumption that celebrities, due to their popularity, credibility, and aspirational value, can significantly shape consumer perceptions and influence purchasing decisions. By leveraging the trust, admiration, and emotional connection that consumers associate with celebrities, brands attempt to enhance recall, build positive brand associations, and ultimately drive consumer behavior. Celebrity endorsement has been found to strengthen brand loyalty by reinforcing brand association through consumer trust in public figures (Choudhary, 2015).

Existing literature strongly supports the effectiveness of celebrity endorsements in influencing consumer attitudes and brand-related outcomes. Prior studies suggest that celebrity endorsements not only improve brand recognition but also contribute to the development of favourable brand attitudes and increased purchase intentions. Consumers often perceive endorsed brands as more reliable, prestigious, and of higher quality, as the credibility and image of the celebrity are transferred to the brand. Research indicates that students exposed to

celebrity-endorsed products are more likely to develop positive attitudes toward the brand and show a higher likelihood of purchase (Kaur & Garg, 2016).

Beyond influencing perception, celebrity endorsements also have tangible implications for consumer buying behaviour. Empirical findings indicate that exposure to celebrity-endorsed products significantly enhances consumers' willingness to purchase, particularly among younger demographics who are more susceptible to aspirational influences. Additionally, celebrity endorsements play a crucial role in shaping perceptions of brand quality, trustworthiness, and prestige (Rajasekaran, 2025). Brands associated with well-known celebrities often achieve better market performance, as endorsements can increase consumer confidence and foster emotional connections with the product (Prasad, Amrutha, & Venkatesan, 2025).

In the Indian context, and particularly in regions such as South Gujarat, the growing penetration of media, digital platforms, and advertising has amplified the visibility and influence of celebrity endorsements. Consumers in this region are increasingly exposed to celebrity-driven marketing campaigns across multiple channels, which significantly shape their brand perceptions and purchasing decisions. Despite this growing trend, there remains a need for a more structured and region-specific understanding of how celebrity endorsements influence consumer behaviour at the local level.

Against this backdrop, the present study aims to explore the influence of celebrity endorsements on brand perception and buying behaviour among consumers in South Gujarat. By analysing secondary data from existing studies, project reports, and industry surveys, the paper seeks to identify key patterns, relationships, and trends in consumer responses. The study contributes to the existing body of knowledge by offering a contextualised understanding of celebrity endorsement effectiveness in a regional setting.

1.2 Objectives

1. To study the influence of celebrity endorsements on brand perception among consumers.
2. To analyze the impact of celebrity endorsements on consumer buying behavior.
3. To identify factors influencing the effectiveness of celebrity endorsements.

2. Review of Literature

The growing prominence of celebrity endorsements in marketing communication has attracted significant scholarly attention, with research consistently highlighting their influence on both brand perception and consumer buying behavior. Early studies primarily

conceptualized celebrity endorsement as a persuasive advertising tool that enhances attention, recall, and brand recognition. For instance, Muhammad Amir Adam and Nazish Hussain (2017) demonstrated that celebrity endorsements significantly impact consumer buying behavior by increasing product visibility and creating favorable brand associations. Similarly, D. K. Selvaraj (2017) found that celebrity influence extends beyond awareness to shape brand perception and purchase intention, particularly in urban consumer markets.

As the literature evolved, researchers began to focus on the psychological mechanisms underlying endorsement effectiveness. The Source Credibility Theory emerged as a foundational framework, emphasizing that the effectiveness of endorsements depends on the perceived expertise, trustworthiness, and attractiveness of the celebrity. Roobina Ohanian (1990) developed a widely accepted scale to measure these attributes, which has been extensively applied in later studies. Building on this, Sajid Mushtaq et al. (2024) empirically validated that credibility significantly enhances brand perception and purchase intention through mediating variables such as brand awareness and trust. Likewise, Naeem Khan and Z. U. Khan (2025) found that brand trust acts as a critical mediator, reinforcing the indirect relationship between celebrity endorsements and consumer purchase intentions.

Another important theoretical contribution is the Match-Up Hypothesis, which suggests that endorsement effectiveness depends on the congruence between the celebrity's image and the brand's identity. S. Sharma and P. Kumar (2024) demonstrated that alignment between celebrity personality and product category significantly enhances consumer perception and buying behavior. Supporting this, A. R. Qaisar et al. (2022) observed that celebrity–brand fit plays a crucial role in influencing brand choice, particularly among female consumers, by strengthening emotional engagement and perceived authenticity. In contrast, studies have also cautioned that mismatch between celebrity image and brand identity can negatively impact consumer perception and reduce endorsement effectiveness.

The literature further highlights the role of Social Learning Theory, which explains how consumers, especially younger demographics, imitate the behaviors and preferences of admired celebrities. K. Raikwar (2021) and S. Parveen et al. (2024) found that celebrity endorsements significantly influence youth buying behavior by creating aspirational appeal and emotional identification. This perspective is reinforced by M. Moraes et al. (2019), who argued that celebrity endorsements operate through both cognitive (brand recall, recognition) and affective (emotional attachment, admiration) pathways, thereby shaping overall consumer decision-making.

In addition to theoretical frameworks, empirical studies have identified key mediating and moderating variables that influence endorsement effectiveness. Research by S. Mushtaq et al. (2024) indicates that brand awareness and brand perception act as mediators between celebrity endorsement and purchase intention, suggesting a hierarchical influence process. Similarly, D. C. Toresa and I. Yuswono (2025) emphasized that increased brand awareness enhances the effectiveness of endorsements in driving purchase decisions. On the other hand, moderating variables such as celebrity attractiveness, expertise, and popularity have been found to significantly influence consumer responses (Sari et al., 2022; Pokhrel, 2023).

A comparative perspective reveals that while earlier research focused on direct effects of celebrity endorsements on consumer behavior, recent studies have shifted towards indirect and model-based relationships. For example, C. Calvo-Porral and J.-P. Lévy-Mangin (2024) demonstrated that the influence of celebrity endorsements varies across product categories and is mediated by brand perception and consumer involvement. Similarly, J. A. Anyadighibe and A. A. Mfon (2022) found that the impact of endorsements differs across industries, with stronger effects observed in high-involvement products such as telecommunications and personal care.

Recent literature also highlights the growing importance of digital and social media environments in shaping endorsement effectiveness. Blessings Norah (2024) noted that the rise of social media has transformed celebrity endorsements into more interactive and personalized forms of communication, where authenticity and relatability play a crucial role. This shift is further supported by Bruno Godey et al. (2016) and Emanuela Arrigo (2018), who found that social media marketing efforts significantly enhance brand equity and consumer engagement in luxury markets. Additionally, G. Cheng et al. (2024) emphasized that credibility and attractiveness remain key determinants even in live-streaming and digital endorsement contexts.

From a regional perspective, studies conducted in India and Gujarat provide valuable contextual insights. C. Jungi and K. Kshatriya (2025) found that consumers in Gujarat respond positively to celebrity endorsements, particularly in terms of trust and engagement, although the degree of influence varies across demographic groups. Similarly, D. P. Patel (2016) observed significant differences in endorsement effectiveness across different clusters within Surat district, indicating the importance of socio-economic and regional factors.

Furthermore, literature on luxury and experiential consumption suggests that celebrity endorsements play a critical role in enhancing brand image, prestige, and aspirational value. Studies by Gokhale (2021), Farooqi (2021), and Dhillon et al. (2022) indicate that consumers

associate celebrity-endorsed brands with higher status and emotional value, which strengthens purchase intention. However, D. R. Sharma (2015) highlighted that the impact of celebrity endorsements on brand loyalty differs between luxury and non-luxury segments, with stronger effects observed in high-involvement and aspirational product categories.

Overall, the literature demonstrates that celebrity endorsements influence consumer behavior through a multi-dimensional framework involving credibility, congruence, emotional appeal, and contextual factors. While early studies emphasized direct persuasive effects, contemporary research adopts a more nuanced approach, incorporating mediating and moderating variables, digital transformation, and regional diversity. This evolving body of knowledge underscores the need for a holistic and context-specific analysis, particularly in emerging markets such as South Gujarat, where consumer behavior is shaped by unique socio-cultural and economic dynamics.

2.1 Research Gap

Despite the extensive body of literature on celebrity endorsements, several significant gaps remain in understanding their comprehensive impact on brand perception and consumer buying behavior. A major limitation in existing research is the fragmented approach, where studies have predominantly studied either brand perception or consumer buying behavior independently (Choudhary, 2015; Jha et al., 2020; Pokhrel, 2023), with limited efforts to integrate both dimensions within a unified analytical framework. This restricts a holistic understanding of how celebrity endorsements simultaneously influence cognitive (perception) and behavioral (purchase decision) outcomes.

Another critical gap lies in the limited integration of mediating and moderating variables. While several studies acknowledge factors such as credibility, attractiveness, expertise, and celebrity–brand congruence (Sari et al., 2022; Sharma & Kumar, 2024), there is insufficient synthesis of how these variables collectively interact with mediators such as brand awareness, brand trust, and emotional attachment (Mushtaq et al., 2024; Khan & Khan, 2025). As a result, the underlying mechanisms through which celebrity endorsements influence consumer decision-making remain only partially explored.

Furthermore, existing literature largely focuses on generalized or urban consumer populations, with comparatively limited attention to regional and context-specific variations. Studies conducted in Gujarat (Jungi & Kshatriya, 2025; Patel, 2016) suggest that demographic, cultural, and socio-economic factors significantly shape consumer responses; however, there is a lack of focused research specifically addressing regions such as South Gujarat. This creates

a contextual gap in understanding how local consumer characteristics influence the effectiveness of celebrity endorsements.

Additionally, there is a noticeable shift in recent years towards digital and social media-driven endorsements, yet many traditional studies do not adequately capture this transition (Arrigo, 2018; Norah, 2024). The evolving role of authenticity, influencer credibility, and parasocial interaction in digital environments remains underexplored in relation to brand perception and buying behavior, particularly in emerging markets.

Another important limitation is that a majority of studies rely on primary data with limited sample sizes, restricting the generalizability of findings across industries and consumer segments. There is a lack of comprehensive secondary data-based synthesis that integrates findings from multiple studies to identify consistent patterns, trends, and broader implications.

In light of these gaps, the present study attempts to provide a holistic, integrative, and region-specific analysis by examining the combined influence of celebrity endorsements on both brand perception and consumer buying behavior among consumers in South Gujarat. By synthesizing secondary data from diverse sources, the study aims to bridge the gap between perception and behavior, incorporate key mediating and moderating variables, and offer a broader understanding of endorsement effectiveness in a regional context.

3. Research Methodology

This study employs a descriptive research approach based on the analysis of secondary data to explore the impact of celebrity endorsements on brand perception and consumer buying behavior in South Gujarat. Data were collected from published research articles, project reports, industry surveys, and credible online sources, focusing on empirical evidence related to consumer responses, brand awareness, purchase intentions, and brand perception. The scope of the study includes various industries such as fashion, FMCG, apparel, and technology, with an emphasis on Indian consumers and demographics comparable to South Gujarat. Relevant studies were selected based on their examination of celebrity endorsement effects, and quantitative measures such as percentages and statistical findings were extracted to facilitate comparison and analysis. The collected data were tabulated, categorized, and interpreted to identify patterns, trends, and relationships, with key themes including celebrity credibility, celebrity–brand fit, emotional engagement, and demographic influences. The study also draws on established frameworks such as the Source Credibility Theory, Match-Up Hypothesis, and Social Learning Theory to explain how celebrity endorsements influence consumer attitudes, brand perception, and purchase intentions.

4. Analysis and Discussion

4.1 Impact of Celebrity Endorsements on Brand Perception

Celebrity endorsements have emerged as a critical determinant in shaping brand perception by influencing how consumers evaluate, interpret, and relate to a brand. Brand perception is not merely formed through product attributes but is significantly constructed through symbolic associations, where celebrities act as carriers of meaning and identity. Moraes et al. (2019) argue that celebrities create both cognitive linkages (such as recall, recognition, and perceived quality) and affective connections (such as admiration and emotional attachment), thereby strengthening overall brand perception.

A consistent finding across the literature is that celebrity endorsements enhance brand credibility and trustworthiness. Choudhary (2015) and Adam and Hussain (2017) emphasize that when consumers perceive a celebrity as credible and trustworthy, these attributes are transferred to the endorsed brand, resulting in improved brand evaluation. However, this effect is not uniform; studies highlight that credibility is contingent upon expertise and authenticity, suggesting that endorsements are more effective when the celebrity is perceived as knowledgeable or relevant to the product category.

Another important dimension is brand image and perceived quality, which are significantly influenced by celebrity associations. Jha et al. (2020) and Rajasekaran (2025) found that celebrity endorsements contribute to a more favourable brand image, making products appear more reliable, prestigious, and of higher quality. This aligns with the symbolic consumption perspective, where consumers associate the lifestyle and status of celebrities with the brand, thereby elevating its perceived value. However, Moraes et al. (2019) caution that such effects are context-dependent, varying across product categories, cultural settings, and consumer segments.

The role of celebrity–brand congruence (match-up effect) has been widely recognized as a key factor in determining endorsement effectiveness. Sharma and Kumar (2024) and Qaisar et al. (2022) demonstrate that when there is a strong alignment between the celebrity's image and the brand's identity, consumers perceive the endorsement as more authentic and persuasive, leading to higher brand favourability. In contrast, a mismatch between the celebrity and the brand may dilute brand meaning and even create negative perceptions, highlighting the importance of strategic selection in endorsement decisions.

Recent studies have also emphasized the importance of mediating variables such as brand awareness and brand recall. Mushtaq et al. (2024) found that celebrity endorsements first enhance brand awareness and perception, which subsequently influence consumer responses.

Similarly, Toresa and Yuswono (2025) highlight that increased brand awareness strengthens the overall impact of endorsements on consumer evaluation. These findings suggest that celebrity endorsements operate through a hierarchical process, where awareness and perception act as precursors to deeper brand evaluation.

Furthermore, demographic and contextual variations play a crucial role in shaping brand perception outcomes. Jungi and Kshatriya (2025) observed that consumers in regional markets such as Gujarat respond positively to celebrity endorsements in terms of trust and engagement, although the degree of influence varies across age groups and social backgrounds. Similarly, Parveen et al. (2024) found that younger consumers exhibit stronger responsiveness to celebrity-driven brand communication, particularly in lifestyle and FMCG sectors.

Comparatively, while earlier studies primarily focused on direct effects of celebrity endorsements on brand perception, recent research has shifted towards understanding indirect and conditional relationships, incorporating mediators (brand awareness, trust) and moderators (gender, culture, product type). This evolution reflects a more nuanced understanding that celebrity endorsements do not operate in isolation but are embedded within a broader consumer decision-making framework.

Overall, the literature indicates that celebrity endorsements significantly enhance brand perception by influencing credibility, brand image, perceived quality, and recall. However, their effectiveness is shaped by multiple interacting factors, including celebrity credibility, brand congruence, consumer demographics, and contextual relevance. This highlights the need for a more integrated and context-specific analysis, particularly in regional markets such as South Gujarat, where consumer perceptions may be influenced by unique socio-cultural dynamics.

4.2 Impact of Celebrity Endorsements on Consumer Buying Behavior

Celebrity endorsements have become a powerful mechanism in influencing consumer buying behavior by shaping attitudes, preferences, and decision-making processes. Rather than acting as a direct trigger for purchase, endorsements operate through a combination of cognitive evaluations (perception, awareness) and affective responses (emotional connection, aspiration), which ultimately guide consumer choices.

A key finding across the literature is the strong influence of celebrity endorsements on consumer attitudes and purchase intention. Raikwar (2021) and Parveen et al. (2024) highlight that celebrities function as symbolic representations of trust, status, and quality, which positively shape consumer perceptions and increase purchase intention. This effect is particularly pronounced among younger consumers, who tend to associate themselves with

celebrity lifestyles and are more likely to emulate their preferences. However, while early studies emphasized a direct relationship between endorsements and purchase intention, recent research suggests that this relationship is often indirect and mediated by psychological factors such as brand perception and emotional attachment.

Another important dimension is the role of celebrity endorsements in enhancing brand awareness and recall, which significantly influence buying behavior. Toresa and Yuswono (2025) argue that endorsements increase brand visibility and memorability, ensuring that the brand is included in the consumer's consideration set during the purchase decision process. This aligns with the hierarchy-of-effects perspective, where awareness acts as a precursor to interest, evaluation, and eventual purchase. However, awareness alone is not sufficient; it must be supported by positive brand associations to translate into actual buying behavior.

The relationship between celebrity endorsements and brand loyalty presents mixed findings in the literature. Hussain et al. (2025) suggest that while endorsements can strengthen initial engagement and encourage trial purchases, their impact on long-term loyalty is relatively limited. Consumers with established brand loyalty rely more on prior experience and satisfaction rather than celebrity influence. In contrast, endorsements are more effective in influencing switching behavior and attracting new consumers, particularly those with low brand attachment. This distinction highlights that celebrity endorsements are more effective as a market expansion strategy rather than a retention tool.

Recent studies have also emphasized the role of moderating and influencing factors that determine the effectiveness of celebrity endorsements on buying behavior. Key variables include celebrity credibility, attractiveness, expertise, and relevance to the product category. Raikwar (2021) and Parveen et al. (2024) note that endorsements are more persuasive when consumers perceive the celebrity as authentic and relatable. Conversely, a mismatch between celebrity image and brand identity can reduce persuasion and even lead to negative consumer responses. Additionally, emotional identification with the celebrity plays a critical role in strengthening purchase intention, as consumers are more likely to buy products endorsed by personalities they admire or relate to.

Comparatively, the evolution of research in this area shows a shift from viewing celebrity endorsements as a direct stimulus for purchase decisions to understanding them as part of a multi-stage decision-making process influenced by mediators such as brand awareness, trust, and perception. This indicates that celebrity endorsements do not independently drive buying behavior but rather interact with multiple psychological and contextual factors to influence consumer decisions.

Overall, the literature suggests that celebrity endorsements significantly impact consumer buying behavior by enhancing awareness, shaping attitudes, and creating emotional engagement. However, their effectiveness depends on a combination of factors, including consumer characteristics, celebrity attributes, and the degree of alignment between the celebrity and the brand. These insights are particularly relevant in regional contexts such as South Gujarat, where demographic diversity and media exposure may further moderate consumer responses to celebrity-driven marketing strategies.

5. Findings

The present study, based on a comprehensive analysis of secondary data, identifies several key findings regarding the influence of celebrity endorsements on brand perception and consumer buying behavior. Each finding is supported by existing literature and analytical insights derived from the study.

1. Celebrity Endorsements Significantly Enhance Brand Perception and Credibility

The analysis reveals that celebrity endorsements play a crucial role in strengthening brand perception by enhancing credibility, trustworthiness, and perceived quality. When consumers perceive a celebrity as credible and authentic, these attributes are transferred to the brand, resulting in a more favourable evaluation. This finding is strongly supported by Choudhary (2015) and Adam and Hussain (2017), who emphasize that celebrity credibility directly influences brand trust and perception.

Furthermore, studies such as Jha et al. (2020) and Rajasekaran (2025) demonstrate that celebrity-endorsed brands are often perceived as more prestigious and reliable, reinforcing the idea that endorsements contribute to positive brand image formation. This aligns with the analysis in Section 4.1, where brand perception is shown to be shaped through both cognitive (recall, recognition) and affective (emotional attachment) processes.

2. Celebrity Endorsements Increase Purchase Intention Through Emotional and Aspirational Influence

A major finding of the study is that celebrity endorsements significantly increase consumer purchase intention by creating emotional connections and aspirational appeal. Consumers, particularly younger demographics, tend to associate themselves with the lifestyle, status, and personality of celebrities, which influences their buying decisions.

This is supported by Raikwar (2021) and Parveen et al. (2024), who highlight that celebrity endorsements act as symbolic representations of trust and aspiration, thereby motivating consumers to purchase endorsed products. As discussed in Section 4.2, this influence is not

purely direct but is mediated through emotional engagement and positive brand perception, confirming that endorsements function through both psychological and behavioral pathways.

3. Celebrity Endorsements Enhance Brand Awareness and Recall, Influencing Purchase Decisions

The study finds that celebrity endorsements significantly improve brand awareness and recall, which are critical precursors to consumer buying behavior. The presence of celebrities in advertisements increases visibility and memorability, ensuring that the brand remains in the consumer's consideration set.

Toresa and Yuswono (2025) support this finding by demonstrating that increased brand awareness strengthens the relationship between endorsement and purchase decision. Similarly, Mushtaq et al. (2024) emphasize that brand awareness and perception act as mediating variables, linking celebrity endorsement to purchase intention. This finding is consistent with the hierarchical process identified in the analysis, where awareness leads to perception, which ultimately drives behavior.

4. Influence of Celebrity Endorsements on Brand Loyalty is Conditional and Limited

The findings indicate that while celebrity endorsements are effective in generating initial interest and purchase intention, their impact on long-term brand loyalty is limited and varies across consumers. Consumers who already exhibit strong brand loyalty are less influenced by celebrity endorsements, as their preferences are based on prior experience and satisfaction.

Hussain et al. (2025) support this observation by noting that brand loyalty mediates the relationship between endorsement and purchase intention but does not guarantee sustained influence. This finding aligns with the analysis in Section 4.2, which suggests that celebrity endorsements are more effective for customer acquisition and brand switching rather than long-term retention.

5. Effectiveness of Celebrity Endorsements Depends on Key Attributes such as Credibility, Attractiveness, Expertise, and Brand Congruence

Another critical finding is that the effectiveness of celebrity endorsements is highly dependent on specific celebrity attributes. Credibility, attractiveness, expertise, and alignment with the brand (match-up effect) significantly influence consumer perception and buying behavior.

Sharma and Kumar (2024) and Qaisar et al. (2022) emphasize that celebrity–brand congruence enhances authenticity and persuasiveness, while mismatched endorsements may lead to negative perceptions. Similarly, Mushtaq et al. (2024) and Khan and Khan (2025) highlight the importance of trust and credibility as mediating factors in influencing purchase

intention. This finding is strongly reflected in both Sections 4.1 and 4.2, where credibility and congruence are identified as key determinants of endorsement effectiveness.

6. Celebrity Endorsements Operate Through Mediating and Moderating Variables Rather Than Direct Influence

The study finds that celebrity endorsements do not directly influence consumer behavior but operate through a set of mediating variables such as brand awareness, brand perception, and trust. Additionally, moderating factors such as age, gender, cultural context, and product type influence the strength of this relationship.

Mushtaq et al. (2024) and Jungi and Kshatriya (2025) highlight the role of these mediating and moderating variables in shaping consumer responses. This finding reflects a shift in recent research from a direct-effect model to a more integrated, multi-stage framework, as discussed in the analysis sections.

7. Regional and Demographic Factors Influence the Effectiveness of Celebrity Endorsements

The study also identifies that the impact of celebrity endorsements varies across demographic groups and regional contexts. Consumers in regions such as South Gujarat, characterized by diverse socio-economic and cultural backgrounds, may respond differently to celebrity endorsements compared to broader national samples.

Studies such as Parveen et al. (2024) and Jungi and Kshatriya (2025) indicate that younger consumers and those exposed to media-driven lifestyles are more responsive to celebrity endorsements. This finding supports the need for region-specific analysis, as highlighted in the research gap and validated through the overall discussion.

6. Conclusion

This study set out to explore the influence of celebrity endorsements on brand perception and consumer buying behavior among consumers in South Gujarat through a comprehensive analysis of secondary data. The findings clearly indicate that celebrity endorsements serve as a powerful marketing tool that significantly shapes both how consumers perceive brands and how they make purchasing decisions.

The study concludes that celebrity endorsements enhance brand perception by strengthening brand credibility, trustworthiness, perceived quality, and recall. Celebrities act as symbolic carriers of meaning, transferring their image, status, and personality to the brand, thereby influencing both cognitive evaluations and emotional associations. However, the effectiveness of this influence is highly dependent on the credibility and authenticity of the celebrity, as well as the degree of alignment between the celebrity and the brand.

In terms of consumer buying behavior, the study finds that celebrity endorsements increase purchase intention by creating emotional engagement and aspirational appeal, particularly among younger consumers. Rather than exerting a direct influence, endorsements operate through a multi-stage process involving mediating factors such as brand awareness, perception, and trust. This highlights that consumer decisions are shaped not only by exposure to celebrity endorsements but also by how these endorsements are processed psychologically.

The study also reveals that while celebrity endorsements are effective in enhancing brand awareness and attracting new consumers, their impact on long-term brand loyalty is relatively limited. Consumers with established brand preferences are less influenced by endorsements, indicating that celebrity-driven strategies are more effective for customer acquisition and brand positioning rather than retention.

Furthermore, the effectiveness of celebrity endorsements is moderated by several critical factors, including celebrity credibility, attractiveness, expertise, and celebrity–brand congruence. A strong match between the celebrity and the brand enhances authenticity and persuasive impact, whereas misalignment can weaken consumer trust and reduce effectiveness. Additionally, demographic and regional variations play a significant role, suggesting that consumer responses in South Gujarat are influenced by socio-cultural and media exposure factors.

Overall, the study contributes to the existing literature by providing a holistic and integrated understanding of celebrity endorsement effectiveness, bridging the gap between brand perception and buying behavior within a regional context. It demonstrates that celebrity endorsements function as a multi-dimensional strategic tool, operating through interconnected cognitive and emotional pathways rather than as a simple promotional technique.

From a practical perspective, the findings suggest that marketers should carefully select celebrities who align with brand values, focus on building credible and authentic endorsement strategies, and leverage emotional engagement to enhance consumer response. At the same time, endorsements should be supported by consistent product quality and brand communication to ensure sustained impact.

Finally, the study acknowledges that its reliance on secondary data limits the ability to establish causal relationships. Therefore, future research can focus on primary data analysis, longitudinal studies, and comparative assessments across regions and industries to further deepen the understanding of celebrity endorsement effectiveness in evolving market environments.
